Understanding your Data

Asking Basic Questions

i) How big is data?

→ df.shape()

ii) How does data look like?

→ df.head() # first 5 data

→ df.sample(5) # random data

iii) what is data type of columns?

→ df.info()

Scanned with OKEN Scanner

iv) Are there any missing value?

→ df.info()

→ df.isnull().sum(). # sum of all null values per column

v) How does data look mathematically?

→ df.describe()

vi) Are there duplicate values?

→ df.duplicated().sum()

vii) How is the correlation between cols?

→ df.corr() # gives correlation between column
