Encoding categorial variables

Categorial data

- Ordinal
  - Every category has relationship and values
  - Grades (S, A, B, C ...)
  - review (good, excellent, bad :)
- Nominal
  - every category are equal values
  - Indian states name, engineering branch,

We need to convert this categorial data in number as machine understand numbers so we use encoding

↓

Encoding

- ordinal encoding → ordinal data
- One-hot encoding → nominal data
