* Label Encoding:

lets take table X as input variable and Y ~~out var~~ output variable.

If x has ordinal data then we use Ordinal encoding

If Y has categorial data then we use Label encoder

* Ordinal encoding:

lets take a example

Education

HS (high school) - Its ordinal data

UG → 01

PgG → 02

PG → 2

HS → 0

UG → 1

PG > UG > HS

2 1 0

So it will assign value according to its strength
